                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; may be produced by alternative splicing.
TISSUE SPECIFICITY: Expressed at particularly high levels in fetal liver, and erythroid tissues of embryos and adults. Found also in adult bone marrow, liver and kidney, and at lower levels in heart, brain and employ.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            related to heme biosynthesis.
SUBUNIT: Homodimer or heterodimer (Potential).
SUBCELLULAR LOCATION: Integral membrane protein. Mitochondrial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DEVELOPMENTAL STAGE: Abundant in the liver but not in non-hematopoietic tissues of E13 embryos.
INDUCTION: By transcription factor GATA-1 during erythroid differentiation and in vitro, by DMSO during terminal erythroid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. T10656
probable ABC-type transport protein T5F17.70 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 16-Jul-1999 #sequence_revision 16-Jul-1999 #text_change 21-Jan-2000
C;Accession: T10656
R;Bevan, M; Lennard, N.; Quail, M.; Harris, B.; Rajandream, M.A.; Barrell, B.G.
submitted to the Protein Sequence Database, June 1999
A;Reference number: Z16533
A;Accession: T10656
A;Molecule type: DNA
A;Residues: 1-680 <ABEV>
